

ALAN BOULESTEIX

INTERN SOFTWARE ENGINEER

After three years in retail and two in banking, I decided to pursue my passion for coding. I enrolled at 42 school in Paris, where I gained expertise in core concepts such as multi-threading, pointers, and algorithm complexity while working on diverse projects. I then interned as a Full Stack Developer at Legal Place, contributing to projects using React, APIs, AWS Lambda, and resolving technical challenges. Now in Canada with a Working Holiday Visa valid until June 2026, I am eager to grow and take on new opportunities.

- Management of multi-currency exchanges on behalf of institutional clients respecting the cut-offs linked to the devices.
- Making contact with customers, counterparties to ensure the right outcome of operations.
- Improvement of procedures and creation of Excel macros to streamline the activity.

PROJECTS

PORTFOLIO

This project is my portfolio. It's made with react and i used a lot of this framework concept such as hooks, props, states, lists keys and fragments. I also used my knowledge in css to design it.

FT_TRANSCENDENCE

This project is a website that allows you to play the game of pong against another player. It contains a chat, a ranking system, and a friends system. The goal of this project is to create a website by learning new language. We chose to use ViewJS for the front-end, NestJs for the back-end, PostgreSQL for our database, TypeOrm as orm and Typescript. I was in charge of chat, so I had to learn and use websockets.

MINISHELL_42

Minishell is a simple Unix shell implemented in C, designed as a project for 42 school. It provides basic shell functionalities similar to bash, including command execution, path handling, environment variable management, and built-in functions.
